

“The Sound Deadening”

Silent Coat Absorber 35

Silent Coat Sound Absorber 35 is a polyurethane foam material with a special formulation to achieve superb sound absorption and flexibility.

The material is designed primarily to prevent rattling of plastic parts and trim. The unique pressure sensitive properties makes it great for sandwiching between panels. After application the material fills the gaps between the surfaces.

Sound Absorber 35 can also be used behind speakers or inside a bass enclosures as a diffuser. The 'egg box' form on the surface absorbs 30-40% more sound than plain material.

- 35 mm thick
- Self adhesive
- Water resistant
- Prevents trim rattle
- Diffuse rear speaker energy
- Sold as single sheet (600 mm x 500 mm)
